## EDUCATION

May 2025      Bachelors - 16 Years  
UNIVERSITY OF GUJRAT

## PROFESSIONAL EXPERIENCE

Mar 2026 - Present      Full Stack Developer, University Of Gujrat - Visiting Faculty FullStack Web Development  
Serve as a FullStack Development Instructor | HTML, CSS, JavaScript | PHP | MySQL |  
Trainer at eRozgaar / University of Gujrat

Nov 2023 - Present      Software Engineer, Freelancer Remotely  
Working as a freelance full-stack developer, delivering responsive and scalable web applications for clients across different domains. Experienced in developing custom websites, admin dashboards, management systems, landing pages, and database-driven applications using PHP, MySQL, JavaScript, Python, and the MERN stack. Skilled in both frontend and backend development with a strong focus on clean UI/UX, performance optimization, problem-solving, and client-focused solutions. Successfully managed multiple projects from planning and development to deployment and maintenance while ensuring quality, responsiveness, and user satisfaction.

Aug 2023 - Mar 2026      Web Developer, Qadri Real Estate  
Working remotely as a Web Developer and Digital Marketer, responsible for developing, maintaining, and updating the company's real estate website and digital platforms. Managing website enhancements, property listings, SEO optimization, social media promotions, and marketing campaigns to improve online presence and customer engagement. Also handling frontend and backend web development tasks, UI improvements, and technical support to ensure smooth business operations.

Aug 2025 - Oct 2025      Frontend Developer, Internship Pakistan  
Completed a React.js internship focused on building responsive and reusable frontend components for modern web applications. Gained hands-on experience in React.js development, UI implementation, component optimization, and frontend performance improvements while working on practical web-based projects.

May 2024 - Jul 2024      Web Developer, UOG Business Incubation Center  
Worked as a contract-based Web Developer on startup and business incubation projects. Contributed to website development, frontend/backend improvements, technical support, and implementation of digital business solutions for startup initiatives and incubation programs.

## RESEARCH & PROJECTS

Feb 2026 - May 2026      GURU Homes Web APP (Startup Project)  
Developed a modern construction company web platform for managing construction services, project workflows, and customer interactions. Implemented AI-based cost estimation features to help users calculate construction expenses efficiently and integrated digital signing contracts functionality for secure and streamlined agreement processing.

Built responsive user interfaces, admin dashboards, and dynamic backend systems using PHP, MySQL, JavaScript, HTML, and CSS with a focus on clean UI/UX, scalability, and performance optimization.

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sep 2025 - May 2026 | <b>Nexora Track – Automated Interview &amp; Recruitment Platform (Freelance Project)</b><br>Developed a rule-based web application designed to automate the initial recruitment and interview process. The platform conducts technical, non-technical, and general interview evaluations using structured logic and automated scoring methods. Implemented modules for candidate management, interview question generation, evaluation dashboards, authentication systems, and performance analytics. Built using HTML, CSS, JavaScript, PHP, MySQL, and Chart.js with a focus on responsive design, clean UI, and efficient workflow management.                                                                                                                                                   |
| Jan 2026 - Apr 2026 | <b>Transport Management System – Live Tracking Mobile App (Startup Project)</b><br>Developed a transport management and live tracking application designed to monitor vehicles, manage routes, and improve transportation operations. Implemented real-time tracking features, admin dashboards, trip management modules, and responsive interfaces. Focused on efficient data handling, performance optimization, and user-friendly functionality for both administrators and users.                                                                                                                                                                                                                                                                                                               |
| Nov 2025 - Feb 2026 | <b>FitGenie Web APP (Startup Project)</b><br>Built a fitness-focused web application with interactive dashboards, user authentication, personalized features, and responsive frontend design. Worked on frontend and backend development using the MERN stack, ensuring smooth user experience, scalable architecture, and optimized performance for modern web usage.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Nov 2025 - Jan 2026 | <b>Qadri Real Estate Web APP (Qadri Real Estate)</b><br>Developed a modern real estate web platform for property listings, customer inquiries, and property management. Designed responsive user interfaces and implemented dynamic backend functionalities for managing properties, user data, and contact requests. Focused on clean UI/UX, mobile responsiveness, and performance optimization using PHP, MySQL, JavaScript, HTML, and CSS. <a href="http://www.qadri realestate.com">www.qadri realestate.com</a>                                                                                                                                                                                                                                                                               |
| Nov 2025 - Dec 2025 | <b>Real Estate Business Website &amp; Dashboard (Freelance Project)</b><br>Developed a responsive real estate website with modern landing pages, property listing management, inquiry forms, and admin dashboard functionality. Integrated interactive UI components, optimized mobile responsiveness, and improved user engagement through clean design and smooth navigation. Built using HTML, CSS, JavaScript, PHP, and MySQL.                                                                                                                                                                                                                                                                                                                                                                  |
| Oct 2025 - Nov 2025 | <b>RayhanX.ai – AI Automation &amp; Business Solutions Platform (Rayhanx AI)</b><br>Contributed to the development of an AI-powered business automation platform focused on improving operational efficiency, lead generation, customer engagement, and workflow automation. Worked on scalable web solutions, AI-integrated systems, automation workflows, chatbot integrations, analytics dashboards, and responsive frontend interfaces. Collaborated on implementing smart automation, cloud integrations, API connectivity, and AI-driven business solutions tailored for startups and modern enterprises. Built using modern web technologies with a strong focus on performance, scalability, clean UI/UX, and seamless user experience. <a href="https://rayhanx.ai">https://rayhanx.ai</a> |
| Jun 2023 - Jun 2023 | <b>Movies Fetch API Project – Web Application (Personal Project)</b><br>Built a movie information web application using movie database APIs to fetch and display movie details, ratings, posters, release dates, and search results dynamically. Implemented API integration, responsive layouts, filtering functionality, and interactive UI components using JavaScript, HTML, and CSS while focusing on performance optimization and seamless user experience.                                                                                                                                                                                                                                                                                                                                   |
| Jan 2023 - Jan 2023 | <b>Weather App – API Based Web Application (Personal Project)</b><br>Developed a responsive weather forecasting web application using third-party Weather APIs to provide real-time weather updates, temperature details, humidity, wind speed, and location-based forecasts. Implemented dynamic API fetching, search functionality, and modern responsive UI using HTML, CSS, JavaScript, and REST APIs with a focus on user experience and clean interface design.                                                                                                                                                                                                                                                                                                                               |

## ADDITIONAL SKILLS

Authentication & Authorization Systems, Frontend Development (HTML, CSS, Bootstrap, Tailwind CSS), Git & Version Control, Object-Oriented Programming (OOP), Software Engineering Principles, Database Design & Management, REST API Integration, Full-Stack Web Developer, PHP & MySQL Developer, CSS3, HTML5, Programmer C++/Python/JavaScript, MERN Stack Developer

## CERTIFICATIONS
